MEDISUN
profi s.r.o.

The new *PRO-NURSE*® *BABY* line of registered private cosmetic brand brings you all-natural products based on the same philosophy of development and production for our cosmetic products for adults and children from 3 years of age.

Two years ago, many of your requirements led us to begin developing and testing a new line of cosmetics for newborn babies. A number of new mothers asked us if our classic cosmetics lines could be used for babies. When we responded that this cosmetics line was not designed for newborn babies, most customers told us that they had successfully treated problematic skin with our products also during pregnancy, when *PRO-NURSE*® Body Milk Cannabis and Body Cream Cannabis in particular helped to alleviate the symptoms of stretch marks and small cracks both in the abdomen and in the thighs and buttocks, and helped to eliminate the onset of signs of turbulent hormone levels and its negative manifestations, such as reddening of the skin, which can develop into eczematous eruption. Moms were able to use our cosmetics with confidence on their newborns. We received countless e-mails, messages, and telephone calls with many praises as well as questions.

This persuaded us to redesign most of our adult products and to refine them while maintaining their same successful all-natural composition. This is why we've adapted the entire line directly to suit the wishes of mothers into the *PRO-NURSE*® *BABY* line for newborns, infants, and toddlers from 0 to 3 years old. This was naturally preceded by dermatological and clinical tests that required time and intensive work with real cases.

Our new line of products is not miraculous, but with the given environmental conditions properly observed, we are doing very well. Our products heal a number of skin problems in newborns, although not immediately, which would otherwise require the use of radical chemical remedies.

The practice of wrapping your child in cotton wool is not without good reason. Cotton is a natural product that greatly helps eliminate eczematous symptoms in newborn babies. Together with our *PRO-NURSE*® *BABY* cosmetic line, we can overcome this together. We have encountered many cases where a physician makes a diagnosis that no mother wants to hear: incipient atopic eczema, rash, origin unknown, etc.

CASE EXAMPLES:

1) Infant (2 months)

Atopic eczema symptoms over the entire back and neck area extending to the hair. Treatment lasted two months, unfortunately with negligible results. The eczema began to show up as cracked skin and pain with significant itchiness. The mother took advice from a friend and applied *PRO-NURSE*® Neutral. Within a week, the skin calmed down, and all negative symptoms disappeared within three weeks. The eczema recurred several times, but with the help of very substantial *PRO-NURSE*® Cannabis, the negative symptoms disappeared within two to three days.

2) Infant (4 months)

Extensive eczema on the face and chest. Treatment was complex and lengthy, with no significant improvement. The skin began to flake, peel, and itch. Beginning with *PRO-NURSE*® Aloe Vera Milk and later with *PRO-NURSE*® Aloe Vera Cream, the redness disappeared, and the skin returned to normal condition within a month without any consequences.

We have encountered dozens of such examples. The success of our products pleased us on the one hand, but at the same time it committed us to take a significant step: the development and production of a test series to be tested on

a large number of the newborn population. The tests produced excellent results, launching the production of cosmetics for babies and others.

We now manufacture products for normal care, intensive care, and clinical care.

TO CONCLUDE, HERE'S A BIT OF OUR ADVICE:

Keep baby dry and clean. Do not use mixed fabrics, but use pure cotton underwear. Wash only in proven detergents based on a mild soap. After each bath, treat the baby's entire body with quality natural cosmetics that we produce with love for you and your children. Read the labels on "cosmetic" products carefully, even if they look friendly to babies. Avoid cosmetics containing paraffin, paraffin oil, and its components. Make sure that the product does not contain harsh chemicals or petroleum products (parabens), which are cheap preservatives with negative side effects. All of these products may insulate the skin from moisture, but they clog the pores of your baby's delicate skin. The skin cannot breathe, sooner or later resulting in eczematous symptoms.

We compare it to place a baby in a bathtub full of crude oil. And you'd never do that.

On behalf of our Development and Production Team, we wish you many happy and healthy moments with your beloved baby.

PS: Ask your doctor or pharmacist for a free sample, or write us and we'll send it to you. You can see for yourself if you're as satisfied with our products as the many customers who have already tried them.

PROTECTIVE AND NATURE

PRO-NURSE® BABY ZINC OINTMENT WITH VITAMIN E

Designed primarily for the treatment of skin defects in diaper area and as a healing ointment with a high zinc oxide content and a balanced ratio of natural oils. These oils make the ointment easily spreadable and absorbable. The high percentage of zinc oxide creates a fine white film. In the baby's variety, we made the ointment more fluid so as not to damage the skin of the baby with excessive pressure when spreading the ointment so that the baby can remain calm.

It soothes and protects irritated areas on the skin. The zinc oxide in the ointment forms a protective complex in sensitive areas.

Always follow the rules of correct application! The ointment should be applied in a very fine and thin film. Do not overapply the ointment to the skin!

Put an appropriate amount in your palm depending on the size of the affected area, or carefully apply the ointment directly from the tube around the edge of the affected area and rub the ointment with gentle circular movement. If applied directly, the ointment must be used for one patient only.

Apply ointment to the affected area and its immediate surroundings so that no white crust remains on the skin after application. White dots on the skin are a sign of correct application. These dots are filled skin pores through which

the zinc oxide reaches the affected area. A thick layer (crust) will dry out the area and create the risk of cracking the newly formed upper layer of skin! This problem can be eliminated by using PRO-NURSE® Cannabis Body Cream, but with correct application, this combination won't be necessary. You can easily alternate both products. After completing the treatment with baby zinc ointment, gently wash off (for example with a soft make-up swab) the remnants of zinc oxide from the skin pores with Baby Body Milk. Also, be sure to lubricate your skin regularly with some baby milk or cream.

Apply the ointment 3 to 5 times a day depending on the extent of skin damage. Keep the wound hygienically clean! Before applying to an open wound, first squeeze about 2 cm of ointment from the tube and discard it.

INGREDIENTS Aqua, Silybum Marianum Oil, Zinc Oxide, Soya Oil, Prunus Amygdalus Dulcis Oil, Cetyl Alcohol, Glyceryl Stearate, Polyglyceryl-3 Methylglucose Distearate, Phenoxyethanol, Ethylhexylglycerin, Cetearyl Nonanoate, Xanthan, Gum, Tocopherol, Parfum

PRO-NURSE® BABY

SHOWER SHAMPOO

WITH NECTARINE

This shower shampoo is exceptional for its washing and healing abilities. This is no ordinary shampoo or shower gel. The washing gel is developed for the hypersensitive skin of your baby. It contains, among other things, a balanced ratio of natural oils of milk thistle, sweet almonds, Aloe Vera juice, coconut, shea butter, hemp oil, rosemary, lavender, and thyme, with additional fine nectarine, minerals, and vitamin E that give the skin the necessary vitality and elasticity.

The shampoo cares for hair very well without drying it out and makes the skin soft and naturally smooth. The washing gel is hypoallergenic and is well tolerated by babies from 0 to 3 of age. The shampoo can later be used as a daily soap for frequent washing of your rascal's hands.

After a bath, we recommend using our body milks; they provide maximum nutrition to the skin and combine with the gel to keep it supple and healthy.

Even though the washing gel is designed for very delicate skin and has passed all dermatological tests and clinical trials, we recommend that the product be carefully tried first in cases of severe psoriasis or atopic eczema. The gel positively soothes the symptoms of eczema, including atopic eczema, and symptoms of psoriasis. It is also very

popular in the "adult" form for small children from 3 years of age.

INGREDIENTS Aqua, Prunus Amygdalus Dulcis Oil, Silybum Marianum Oil, Butyrospermum Parkii Butter, Glycine Soya Oil, Cocos Nucifera Oil, Cera Alba, Cetyl Alcohol, Glycerol Monostearate, Polyglyceryl-3 Methylglucose Distearate, Squalane, Aloe Vera Juice, Tocopherol, Rosmarinus Officinalis Leaf Oil, Lavandula Hybrida Oil, Thymus Vulgaris Flower/Leaf Oil, Parfum.

PROTECTIVE AND NATURE

PRO-NURSE® BABY

BODY MILK & CREAM

NEUTRAL

This Baby Body Milk and Body Cream NEUTRAL with gentle natural perfume are primarily designed for everyday care for skin. They contain a balanced mixture of natural oils with a high content of vitamins and minerals. The basic composition of oils from sweet almonds, milk thistle, shea butter, soy, coconut, and a triad of Provençal herbs leaves a delicate natural scent. Even though they contain perfume, it's just the perfume from herbs used, so you don't have to be afraid of an attack of insensitive chemicals.

Don't be afraid of the name Cannabis. The products contain NO psychoactive THC. Our DEKRA laboratory, where all series are monitored, guarantees that.

Baby Body Milk Neutral and Baby Body Cream Neutral are the basic varieties of the three creams we produce. They are hypoallergenic and are intended for slightly or medium stressed skin in the diaper area, but they can be also used on the face and the entire body.

Both products can always be used for all-day care in hospitals and other facilities.

The Milk and Cream are a mixture of natural substances and oils and are well tolerated by all skin types and colours. They supply the skin with nourishment and make it soft and supple. They soak in quickly and leave no greasy or impermeable film after application.

Both Milk and Cream products have the same ingredients. The only difference is in their thickness and therefore in their application. We adapted the children's variety to the gentle application.

INGREDIENTS Aqua, Prunus Amygdalus Dulcis Oil, Silybum Marianum Oil, Butyrospermum Parkii Butter, Glycine Soya Oil, Cocos Nucifera Oil, Cera Alba, Cetyl Alcohol, Glycerol Monostearate, Polyglyceryl-3-Methylglucose Distearate, Squalane, Tocopherol, Rosmarinus Officinalis Leaf Oil, Lavandula Hybrida Oil, Thymus Vulgaris Flower/Leaf Oil, Parfum.

PRO-NURSE® BABY

BODY MILK & CREAM

ALOE VERA

Baby Body Milk Aloe Vera and Baby Body Cream Aloe Vera with gentle perfume are designed primarily for more intensive everyday care for skin. In addition to Aloe Vera juice, they contain a balanced mixture of natural oils with a high content of vitamins and minerals. The basic composition of oils from sweet almonds, milk thistle, shea butter, soy, coconut, and a triad of Provençal herbs leaves a delicate natural scent. Aloe Vera helps very well to soothe the symptoms of eczema and other negative skin symptoms.

Baby Body Milk Aloe Vera and Baby Body Cream Aloe Vera are the middle varieties of the three creams we produce. They are hypoallergenic and are intended for medium and heavily stressed skin of your baby.

Both products can always be used for all-day care in hospitals and other facilities.

The Milk and Cream are a mixture of natural substances and oils and are well tolerated by all skin types and colours. They supply the skin with nourishment and make it soft and supple. They soak in quickly and leave no greasy or impermeable film after their application.

Both Milk and Cream products have the same ingredients. The only difference is in their thickness and therefore in their application. The Milk is easier to apply and so it can be also used after bath, sunbathing, and sunburn, although the Cream can be used in these applications as well.

INGREDIENTS Aqua, Prunus Amygdalus Dulcis Oil, Silybum Marianum Oil, Butyrospermum Parkii Butter, Glycine Soya Oil, Cocos Nucifera Oil, Cera Alba, Cetyl Alcohol, Glycerol Monostearate, Polyglyceryl-3-Methylglucose Distearate, Squalane, Aloe Vera Juice, Tocopherol, Rosmarinus Officinalis Leaf Oil, Lavandula Hybrida Oil, Thymus Vulgaris Flower/Leaf Oil, Parfum.

PROTECTIVE AND NATURE

PRO-NURSE® BABY

BODY MILK & CREAM

CANNABIS

This Baby Body Milk and Body Cream with gentle natural perfume are primarily designed for lubricating extremely stressed skin with a tendency towards eczema and psoriasis. They contain hemp oil (Cannabis Sativa Seed Oil) and a balanced mixture of natural oils with a high content of vitamins and minerals. The basic composition of oils from sweet almonds, milk thistle, shea butter, soy, coconut, and a triad of Provencal herbs leaves a delicate natural scent. The cannabis (hemp) helps to soothe the symptoms of eczema and other negative manifestations of the skin for babies from 0 to 3 years of age.

Don't be afraid of the name Cannabis. The products contain NO psychoactive THC. Our DEKRA laboratory, where all series are monitored, guarantees that.

Baby Body Milk Cannabis and Baby Body Cream Cannabis are the last varieties of the three creams we produce. They are hypoallergenic and are intended for extremely stressed skin. Both products are suitable as a day and night milk/cream. This cream is the richest from the triad of PRO-NURSE® BABY creams and produces the best results for problematic skin.

Both the products can be always used for all-day care in hospitals and other facilities.

Both Milk and Cream products are a mixture of natural substances and oils and are well tolerated

by all skin types and colours. They supply the skin with nourishment and make it soft and supple. They soak in quickly and leave no greasy or impermeable film after their application.

Both Milk and Cream products have the same ingredients. The only difference is in their thickness and therefore in their application. The Milk is easier to apply and so it can be also used after bath, sunbathing, and sunburn, although the Cream can be used in these applications as well.
